R	Too Soon									Sealer Application R	
O B L E M	Paint Cracking									CB	
	Paint Discoloration										
	Lines Showing Through Sealer										
TYPICAL CAUSES										POSSIBLE SOLUTIONS	
Coating application too thin		X			x	X				Apply more coating, 3 coats in drive lanes	
Coating application too thick							X	X		Dilute mix more, use additive in mix	
Squeegee use / rough pavement		Χ			X					Use spray application method	
Temperature was too low during & after application						X	X			Temperature should be >50°F, use some additive	
No sand or not enough sand					x	X				3 to 5 lbs/gallon is best	
Paint applied too thick				x						Thin paint, spray faster	
Striping too soon after sealer application			X							Allow sealer to cure longer	
Usi	Using oil based (Alkyd) paint		Χ							Use latex based paints	
Ab	uild up of old lines	X								Grind off old lines prior to sealcoating	
Poor cleaning procedures or improper wax used on floors								x		Institute new cleaning program and/or use stain resistant wax	
Shady areas, no sun (trees, walls, buildings,)						X	X	x		Use additive in mix	
Opened to traffic too soon					x	X	X	x		Allow longer curing, use additive in mix	
Improper deicing chemicals						X	X	x		Use only sand and regular salt	
Ар	olied 2 nd coat too soon					X	X	x		Allow 1 st coat to cure longer
